

A NEW COLLABORATION BETWEEN NANNI AND SWEDE SHIP

SWEDE SHIP chose NANNI to equip its boats for Swedish and Norwegian Search and Rescue organizations with T8V.370 engines with waterjet. Thanks to the team of Universal Power Nordic AB (Nanni official distributor in Sweden), 16 boats have already been delivered.

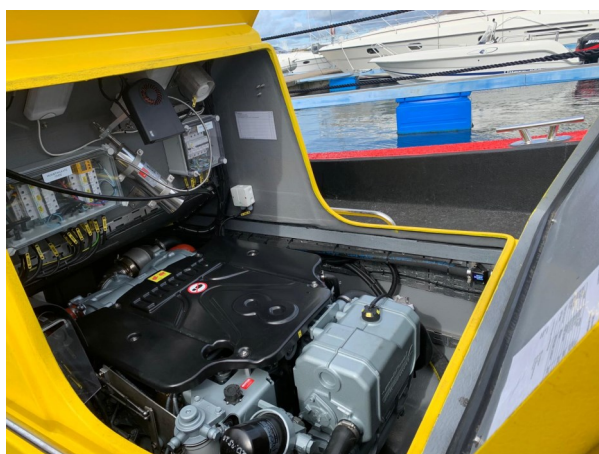

These boats are high speed robust units of 8m for a diversity of rescue and assistance operations in harsh conditions such as towing, search missions, rescue from sea, fire-fighting, bilge pumping, diving support, medical evacuation...

These vessels are powered by Nanni with T8V.370 engine with 8 cylinders in V and 370 hp (272 kW @3800 rpm). This engine delivers its torque at low rpm ensuring a faster hole-shot and stunning acceleration.

With waterjet propulsion, these rescue boats are perfectly suitable for search operations close to shore and efficient rescue of persons from the water.

Its easy access for servicing, excellent balance and state of the art of marinization make it the best of class engine in its category.

NANNI is proud to announce this new collaboration.
