

NANNI, PARTNER OF INTEGRITY BOATS

NANNI is proud to equip the new model of the Integrity Boats shipyard, the Classic 440 Sedan, powered with a N6.285CR2 engine, 284 hp at 2500 rpm.

Designed by the Australian shipyard Integrity Boats, the Classic 440 Sedan has a 13.6m long hull. This yacht is designed and built to offer exceptional performance at sea. It is ideal for long distance or coastal cruising. It is also appreciated for its low maintenance, stability and robustness.

The Nanni N6.285CR2 engine has been chosen by Integrity Boats for its large displacement and high torque at low revs (2500 rpm, with 6 cylinders in line, developing 284 hp). This type of power is therefore particularly suitable for the displacement hull of the Classic 440 Sedan model.

Sea trial results show that the vessel reaches a hull speed of 8.5 knots at a low rpm (1900 rpm), for a frugal fuel consumption of 17.4 litres per hour.

Each year, about ten engines will be produced for the Integrity Boats yard.
